

Build on the Modern Internet

Elastos is an open-source public blockchain that combines the hashpower and security of Bitcoin with industry standard Ethereum smart contracts resulting in superior performance.

Founded by Rong Chen, a Microsoft veteran and active contributor to the early days of the internet, the ELA Mainchain went live in 2017 and has been under active development since its launch. Elastos now has more than 70 engineers worldwide contributing to the development of its Hybrid AuxPoW + DPoS consensus protocol and sidechain scaling solution.

We are actively seeking and funding projects and developers to join us in building the Modern Internet. For more information, visit our developer website at:

developer.elastos.org

Full Featured Ecosystem

Elastos, in association with its ecosystem partners, provides a full suite of services required to build a wide array of dApps, from storage and identity solutions to business and digital asset support.

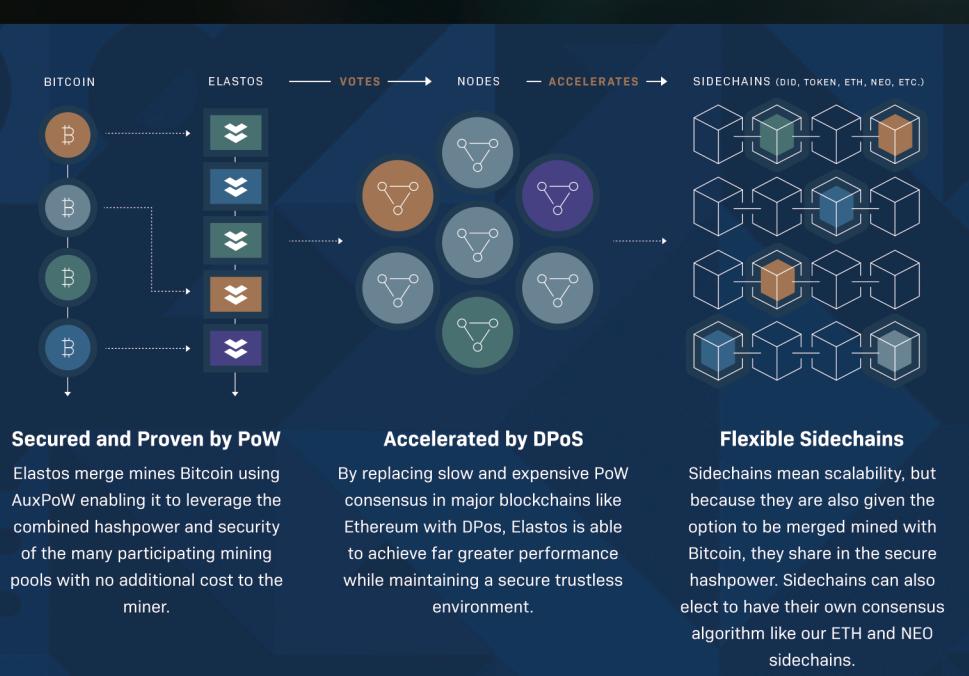

Web APIs

Connect your back-end to Elastos to quickly integrate our services, then move to fully decentralize with our core libraries if necessary.

elastos.js

A javascript SDK that gives easy access to the Elastos blockchain's features and services.

cyber republic

With funding in excess of 16 million ELA tokens, Cyber Republic is one of the top new DAOs to date. Officially launched in August 2018, Cyber Republic maintains a publicly managed fund by a council and its community members.

We are actively seeking and funding projects and developers to join us in building the Modern Internet. Join our public DAO Cyber Republic at:
